

5 Easy Steps to Getting the Best Computer for Your Money

Free Report presented by TC-PC, LLC.

You've made a wise decision – by taking advantage of this **free** report, you can put our over 14 years of real-world computer expertise and experience to work for you. We've seen it all! We know the **pitfalls to avoid** when buying a new computer system – we know the **shortcuts** computer companies often take to save them money, and pawn off on you an inferior product. So if you want to get the best computer you can for your hard-earned money, read on...

Step 1

Never, ever buy the cheapest model they make. Isn't that true for all products? When you bought your last car, did you go straight to a salesperson and say "Give me the cheapest thing on the lot"? Or did you consider important factors such as: capacity, gas mileage, luxury items, etc.? Don't make the mistake of thinking computers are different! If it's a cheap price, it will be a cheap system and a cheap performer as well! Guaranteed. Always move away from the low-end model. Consider their business-class offering – designed for optimum performance and durability.

Step 2

Always know what you need in a computer before you buy. On the reverse of this report will be our "New Computer Buyer's Guide" – it will help you simply decide what is important to you in a computer system. Use this guide as you compare prices, shop online, or browse at the computer store.

Step 3

Compare 'apples to apples.' Just a small difference in a model or feature will often make a huge difference in price AND performance. Different components vary greatly in price. If there is a big difference in price, find out why. Often the systems you are considering will have major differences.

Step 4

Secure your Data. Do NOT make the mistake that many have made by assuming their data will be OK. Millions have found out the hard way that computers can crash, and data can be lost. You simply must consider how you will secure and backup your important files. What type of drive will you need to backup? Can it be automatic? Answer these questions as you configure your new computer.

Step 5

Take advantage of TC-PC's free consultation offer. Use the buyer's guide as you shop for a new computer, get a quote on a system based on the guide, then call us and schedule a free consultation with one of our professionals. We'll help you evaluate your needs vs. the proposed computer system – no slick sales talk, no pressure – just our free professional advice – no charge – as a service to you!

New Computer Buyer's Guide

The Five Questions you must ask before you buy your next computer:

rank as follows:

1=not important to me to 5=very important
